

Hello,

I explain my project to you. It is a Civil Security project.

I would like to set up 5 DMR repeaters within a department on amateur radio frequencies.

I am looking for a completely autonomous software solution.

- No hacking
- No possibility to cut my server

FreeDMR is I think to be a very good solution.

I would like some help setting up my project.

I can give my login codes for someone to look at my server.

Thanks

Sebastien - F4GQK
